It determines whether a crack will grow under applied loads. - Fracture Toughness (K_{IC}): The critical value of the stress intensity factor at which crack propagation becomes unstable, leading to failure. - Crack Tip Plastic Zone: The region near the crack tip where plastic deformation occurs, influencing crack growth behavior. - Paris' Law: An empirical relationship describing the rate of fatigue crack growth under cyclic loading.

Types of Fracture

- Elastic Fracture: Occurs when the material behaves elastically up to the point of fracture. - Plastic Fracture: Involves significant plastic deformation before failure. - Brittle Fracture: Characterized by rapid crack propagation with minimal plastic deformation. - Ductile Fracture: Involves considerable plastic deformation, providing warning before failure.
