Screens and Navigation

HMI screens serve as the visual interface, each designed for specific functions (e.g., start menu, control panel, alarm log). Navigation between screens is often event-driven, triggered by button presses or system conditions.

Scripting and Logic

Delta HMI supports scripting languages like VBScript or C-like scripts for complex logic, timers, and data processing, enhancing the interactivity and functionality of the interface.

Communication Protocols

Establishing reliable data exchange between the HMI and PLCs or other controllers is fundamental. Proper configuration of communication protocols ensures real-time data accuracy.

Popular Delta HMI Programming

Examples

Let's explore some common and practical examples that demonstrate how to leverage Delta HMI features effectively.

1. Basic Start/Stop Motor Control Interface

Objective: Create a simple interface to control a motor, including start, stop, and status indication. Implementation Steps: - Design the Interface: - Add two push buttons: "Start" and "Stop." - Add an indicator lamp: "Motor Running." - Display labels for clarity. - Configure Tags: - Create a Boolean tag `Motor\_Control` linked to PLC coil controlling the motor. - Create a Boolean tag `Motor\_Status` linked to the PLC feedback indicating motor running state. - Program Logic: - Assign the "Start" button to set `Motor\_Control` to true. - Assign the "Stop" button to reset `Motor\_Control` to false. - Use PLC logic to energize/de-energize the motor based on `Motor\_Control`. - Use the `Motor\_Status` feedback to turn on/off the indicator lamp. - HMI Screen Logic: - When "Start" is pressed, send command via `Motor\_Control`. - When "Stop" is pressed, reset `Motor\_Control`. - The indicator lamp reflects the real-time status from `Motor\_Status`. Outcome: A straightforward, user-friendly interface that allows operators to control a motor seamlessly, with clear visual feedback.

2. Alarm Management System
